

Task 5 — Windows Logs & Event Viewer (Event IDs)

SOC Analyst Internship — Practical Report

This report documents practical work involving Windows Event Viewer, the Windows Security log, and key Windows Event IDs relevant to Security Operations Center (SOC) analysis.

Objectives

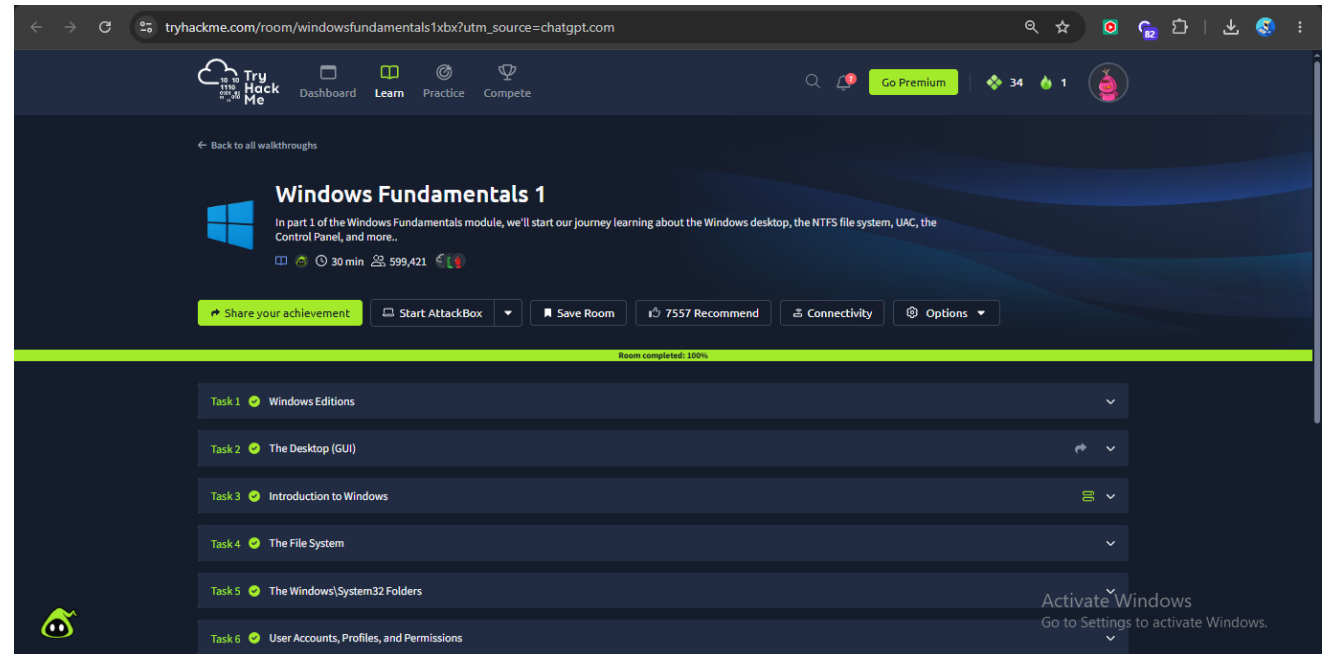

Objective	Status
Explore Windows logging and Event Viewer	Completed
Access Windows Logs → Security	Completed
Filter and inspect Event ID 4624	Completed
Document five important Event IDs	Completed
Analyze a captured Event ID 4625	Evidence not included in uploaded screenshots

Learning Resources

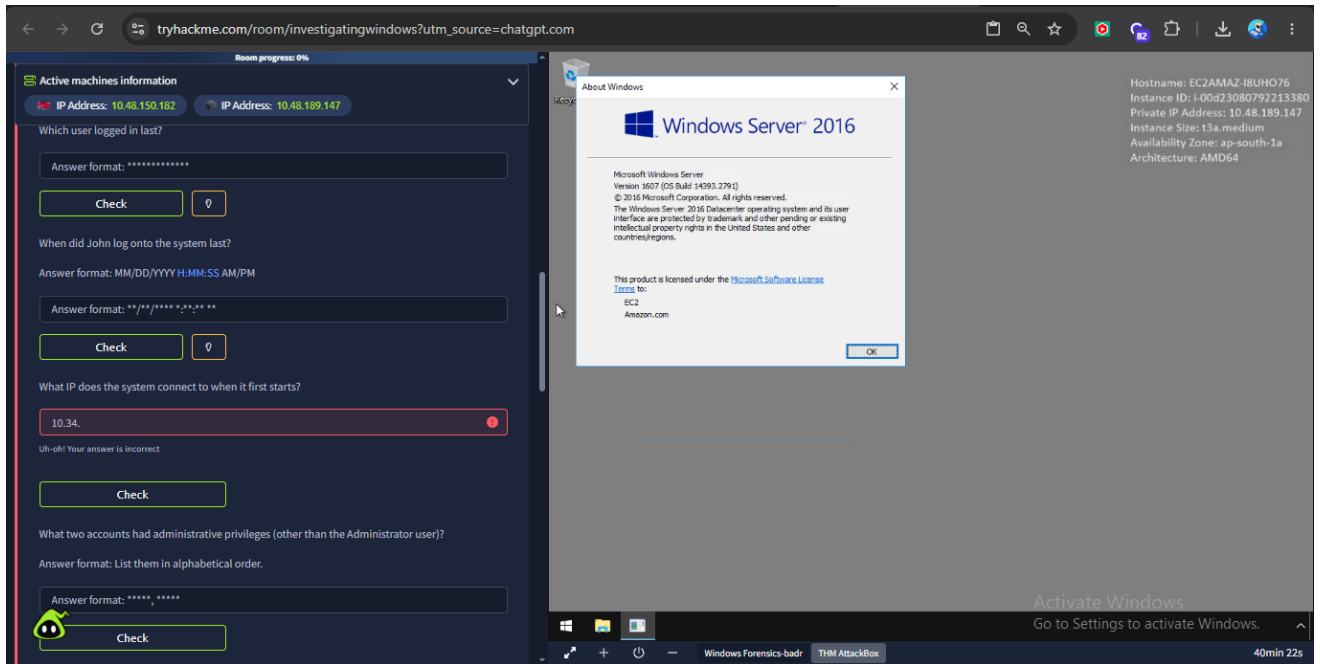

- TryHackMe — Windows Fundamentals 1
- TryHackMe — Investigating Windows

Practical Evidence

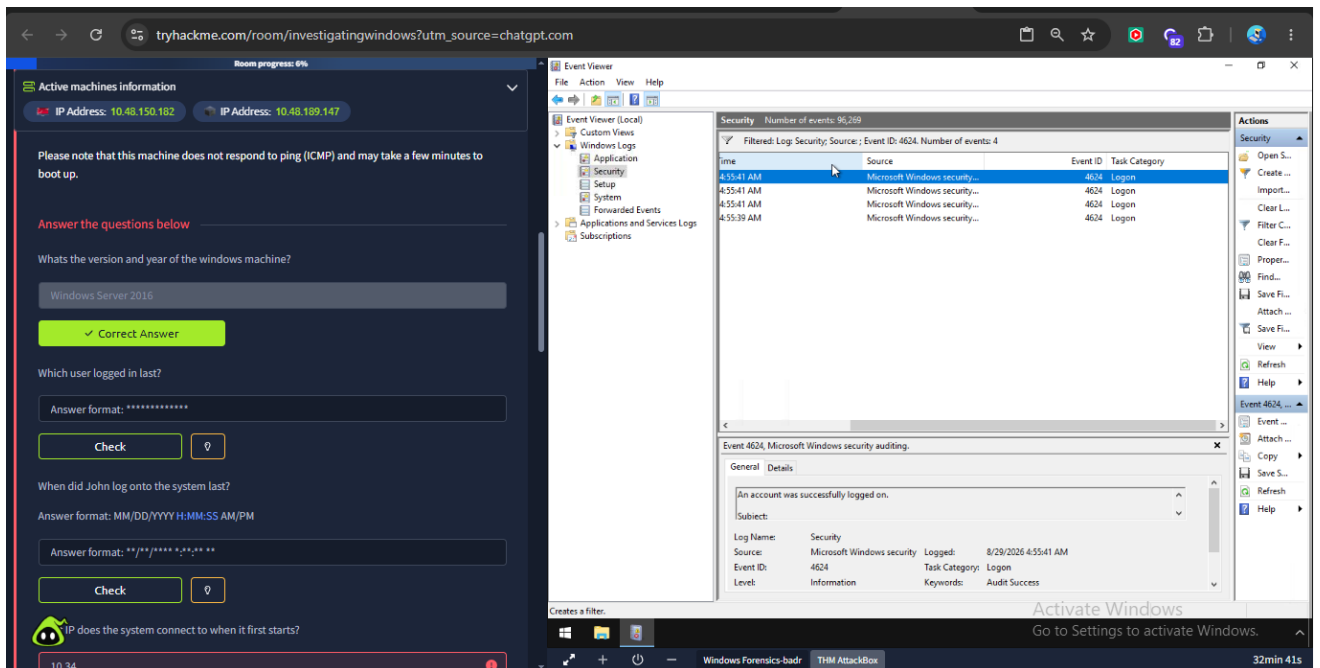

Windows Fundamentals 1 learning environment

Windows investigation environment

Event Viewer Security log filtered for Event ID 4624

Event ID 4624 details — successful logon

Room progress: 0%

Active machines information

IP Address: 10.48.150.182 IP Address: 10.48.189.147

Please note that this machine does not respond to ping (ICMP) and may take a few minutes to boot up.

Answer the questions below

Whats the version and year of the windows machine?

Windows Server 2016

✓ Correct Answer

Which user logged in last?

Answer format: *****

Check 0

When did John log onto the system last?

Answer format: MM/DD/YYYY H:MM:SS AM/PM

Answer format: **/**/**** *:*:*: *

Check 0

IP does the system connect to when it first starts?

10.34.

Event Viewer

Event Properties - Event 4624, Microsoft Windows security auditing.

General Details

An account was successfully logged on.

Subject: Security ID: SYSTEM Account Name: EC2AMAZ-18UH0765 WORKGROUP Domain: DnsE7

Log Name: Security Source: Microsoft Windows security Logged: 8/29/2026 4:55:41 AM Event ID: 4624 Task Category: Logon Level: Information Keywords: Audit Success User: N/A Computer: EC2AMAZ-18UH076 OpCode: Info More Information: [Event Log Online Help](#)

Five Important Windows Event IDs

Event ID	Meaning	SOC Relevance
4624	Successful Logon	Tracks successful authentication activity.
4625	Failed Logon	Useful for detecting password guessing or unauthorized attempts.
4688	Process Creation	Helps identify suspicious process execution.
4720	User Account Created	Helps detect unauthorized account creation.
4724	Password Reset Attempt	Useful when investigating account manipulation.

Event ID 4624 Analysis

Event ID: 4624 **Category:** Logon **Meaning:** Successful logon

The captured evidence shows the Security log filtered for Event ID 4624 and an opened event record. A SOC analyst can use these details to review account information, timestamps, logon identifiers, the affected computer, and other context surrounding the authentication.

A successful logon is not automatically malicious. It becomes more interesting when it occurs at an unusual time, from an unexpected workstation or source, after repeated failed logons, or for an account that normally would not access the system.

Event ID 4625 Investigation Workflow

Evidence note: The uploaded screenshots do not contain an actual captured Event ID 4625 record. The following section documents the correct analysis workflow rather than claiming that a specific 4625 event was captured.

Field	What the analyst checks
Time Created	When the failed authentication occurred.
Account Name	Which account was targeted.
Logon Type	How authentication was attempted.
Failure Reason	Why authentication failed.
Workstation Name	Which host was involved.
Source Network Address	Potential remote source, when available.

SOC Investigation Questions

- What happened?
- Which account was targeted?
- When did the failed logon occur?
- Why did authentication fail?
- Was the activity expected or suspicious?

Conclusion

This practical work demonstrated how Windows Event Viewer can be used to inspect Security events and investigate authentication activity. The Event ID 4624 evidence confirms successful practical interaction with the Security log. For complete alignment with the task requirements, an actual Event ID 4625 screenshot should be added before submission.
